Who we are

We are a Bucks County, family owned and operated business specializing in concrete artistry. Although formed in 1997, Liquid Stone's artisans have decades of combined experience in concrete, construction, design, masonry, and architecture prior to this date. Three of us met while attending the architecture and design program at Philadelphia College of Textiles and Science (now Philadelphia University). We were all continuing education students looking to expand on our artistic abilities. It was fate that we all met and collaborated to form this amazing company. In the past few years, we've added another 'Philly U' alumni from the Industrial Arts program to round out our team. We also have some very talented local masonry artisans and carpenters who come on board as needed to fulfill specific project needs.

We truly are a team of Concrete Artisans.

Concrete isn't just gray anymore!

About our work

Although all concrete starts out with a simple ancient recipe of sand or stone (aka aggregate), cement, and water, that's where we take it to another level. Yes, we can place concrete for pretty much any purpose, but our hearts are in the **Art of Concrete!** We want to see how far we can push the boundaries of what concrete can do and be. We like to design and create amazing pieces of art that just happen to be functional. All our pieces are custom designed for the individual client, so there is no mass production or prefabricated slabs in our studio. For more than twenty years we have been designing and producing concrete countertops, furniture, fireplace surrounds, fire bars, restaurant and bar tops, polished concrete floors.

Concrete is FUN! If you can dream it, we can mold it!

As much as we create the art, each piece should reflect the personality of the client and their space. We invite our clients to be part of not only the design process, but to come into the studio on the day we pour their project and get messy. From taking photos of their pieces being molded and poured, to getting their hands in the mix and really being part of it.

When it comes to floors, there is nothing more exciting than taking a messy old worn and neglected concrete floor and exposing an amazing surface! It brings a whole new dimension to the space and home or business. Our question: why would anyone want to spend money by putting another type of flooring over a perfectly good floor surface to begin with? And it's pretty sustainable too!!

Liquid Stone has participated in 5 Bucks County Designer Homes in the past 15 years, the 2015 and 2016 Design Philadelphia, 2015 IFDA Take a Seat program, and numerous 'Green' and Art shows and festivals. Liquid Stone hosts multiple Open Studio events during the year to expose artistic minded individuals to the amazing world of concrete.

Our countertops and other concrete pieces are non-porous and sealed with a water based zero VOC sealer to create a minimal maintenance surface. The addition of recycled chopped up fiberglass gives each piece additional strength and durability.
